1. Biggest problem is that the version I was looking at had many inconsistencies and sometimes the functionality deteriorated the more I was trying to do things, e.g. setting up the user accounts--the window to do this moved down the screen with each user and ultimately disappeared. The UMD version was not working correctly as it had been a few months ago when I tried it the first time (e.g. allergies showed as none, when I knew the patient was supposed to have allergies).

2. As far as tech support, initially it would be helpful because their can be glitches that require a tweak in the code used to image instances of the master - but I don't believe it would be a frequent or time consuming level needed and using the community forum would probably be adequate to request help.

Q7

What would you delete from this EHR or exercises to make it better?

Answered: 2   Skipped: 1

1 . N/a

2 . My comments were too long here. Will send in an email.

Q8

What would you add to this EHR to make it better?

Answered: 3   Skipped: 0

1 . A larger log off button. The log off button was difficult to find.

2 . My comments were too long here. Will send in an email.

3 . It might be nice to share resources as faculty develop case studies - share the cases and the answers on the educator Libre Health forum but encourage everyone to contribute
